Molded Case Circuit Breaker**

# Building a better future

HYUNDAI U-Series  
Molded Case Circuit Breaker

---

The philosophy of HYUNDAI U-series MCCB is  
**for YOU and being NEW**

---

The word **U** represents  
**YOU**, our business partner and  
**NEW**, the latest needs of customers.

---

The design concepts of U-Series MCCB pursue advanced technology in size,  
customized characteristic in range and powerful capability in specification.  
All come out from our sincerity to be close to you.

## Introduction

| Wide and powerful range |

## UAB, UCB Type

[ up to 1600AF ]

### | Compact size

- High breaking capacity in 60mm depth, up to 250AF
- Application of current-limiting technology
- UAB type
  - up to 25kA at AC380/415V in W75 x H130 x D60mm
- UCB type
  - up to 50kA at AC380/415V in W90/105 x H165 x D60mm

### | Reliable quality

- Type-tested by KEMA Netherlands

### | Wide and powerful range

- 50, 125, 250, 400, 630, 800, 1000, 1250, 1600AF
- Fixed or adjustable thermal trip mechanism up to 800AF
- Double protected electronic trip mechanism for 1600AF

### | Various accessories

- Motor operator and operating handles for smooth operation
- Terminal cover and terminal busbar for safety
- DIN rail adapter and mounting base for easy installation
- Switches and trip devices for control by signals

### | Modern and customized design |

## UPB, HBL Type [ 125, 160, 250, 400, 630AF ]

### | High breaking capacity

- Up to 150kA at AC380/415V
- Based on current-limiting technology
- $I_{cs} = 100\% I_{cu}$

### | Reliable quality

- Type-tested by international test authorities
- KEMA for IEC standard, KERI for NEMA standard

### | Diverse trip mechanism and application

- Fixed & adjustable thermal, electronic
- Motor protection, nuclear power plant

## Miniature Type [ 30, 50, 100AF ]

### | Industrial and residential application

- Mini molded case circuit breaker
- Mini earth leakage circuit breaker
- Up to 100A, 10kA

### | Various protection

- Short-circuit and overload
- Earth leakage protection

### | Internal accessories

- Auxiliary switch
- Trip alarm switch
- Shunt trip

## Features

### | Adjustable rating in full range with diverse trip mechanisms |

- U-Series MCCB adopts adjustable rating function in full range from 50 to 1600AF. With diverse trip mechanisms of U-Series MCCB, you will be provided with wide options for system design and more flexible load fluctuations.

#### [ UAB, UCB type ]

Adjustable instantaneous  
for motor protection

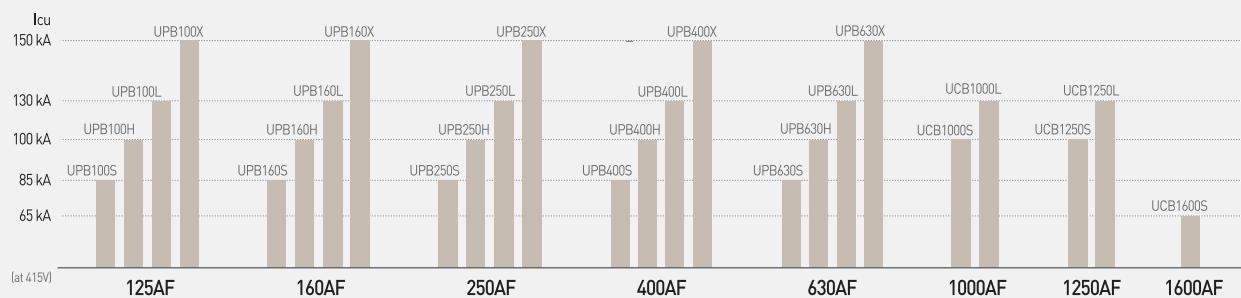

## | Wide and powerful production range |

- U-Series MCCB supplies you with wide and powerful production range; 3 to 1600A, 5 to 150kA at AC415V from general distribution boards to nuclear power plants.
- U-Series MCCB also completely covers Hi-Series MCCB range with better characteristics.

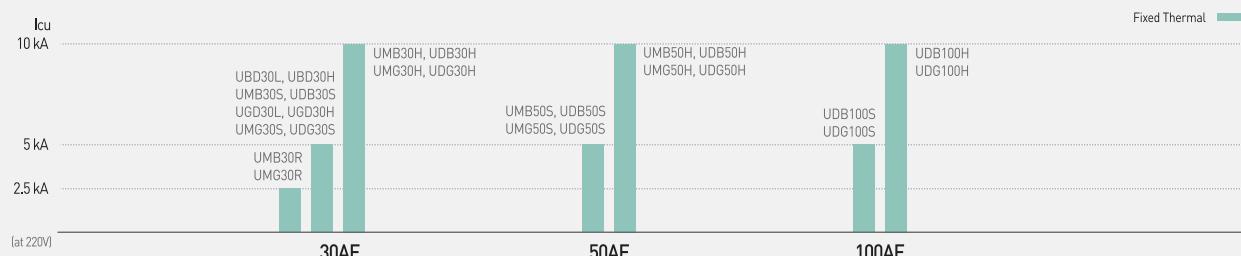

### | Thermal magnetic type

### | Electronic type

### | Miniature type

### | Motor protection - UPB type 125-250AF

### | Q-class HBL type - 100-225AF

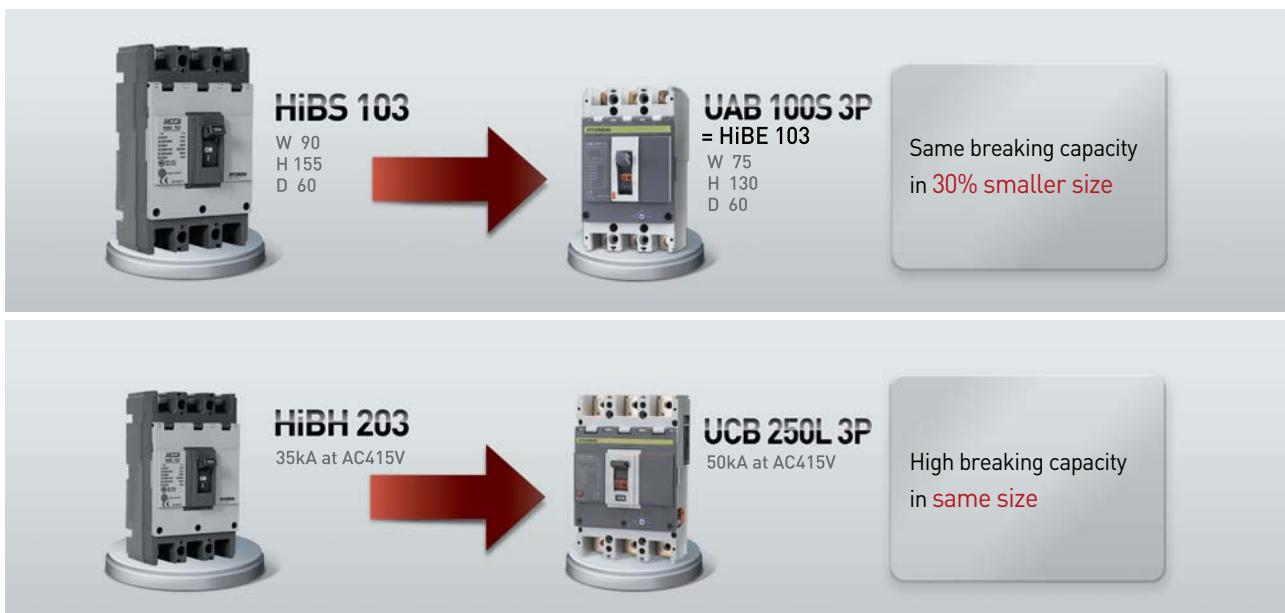

### | Switch disconnector - UAD type 50-100AF, UCD type 50-1250AF, UPD type 125-630AF

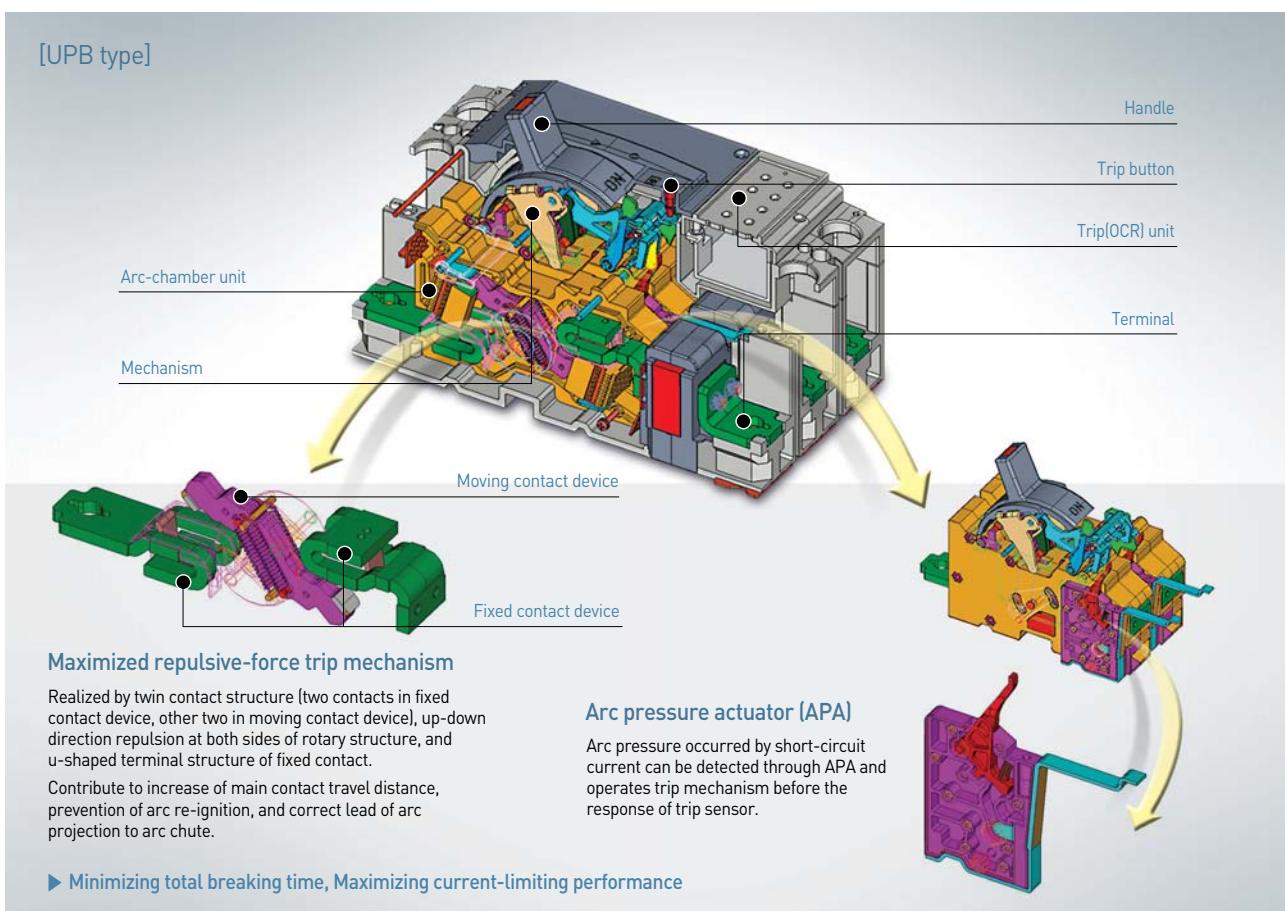

## Features

### | High breaking capacity, realized by advanced technology and optimized design |

- Our optimized design by advanced current-limiting technology allows U-Series MCCB to realize high breaking capacity in a smaller size compared to Hi-Series MCCB, contributing to compact design of system.

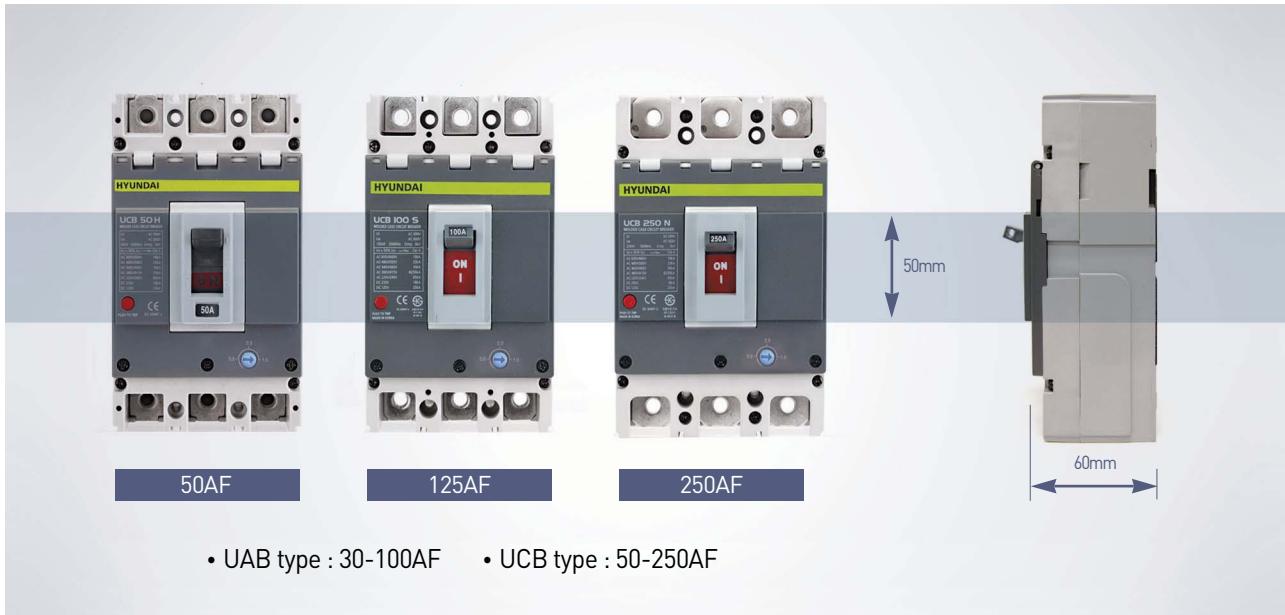

- The current-limiting characteristic of U-Series MCCB also minimizes the effects from fault currents and offers cost-effectiveness.

## | Standardization of dimensions |

- U-Series MCCB minimizes the difference in size of each model, so that they can be easily replaced whenever the specifications of the system changes.

## | Reliable quality and various applications |

- U-Series MCCB is type-tested by international test authorities such as KEMA and KERI as well satisfying IEC60947-2 and NEMA AB-1 standards. It also acquired various marine classes and certificates for nuclear power plants.

## Features

### | Modern and refined design |

#### Model name

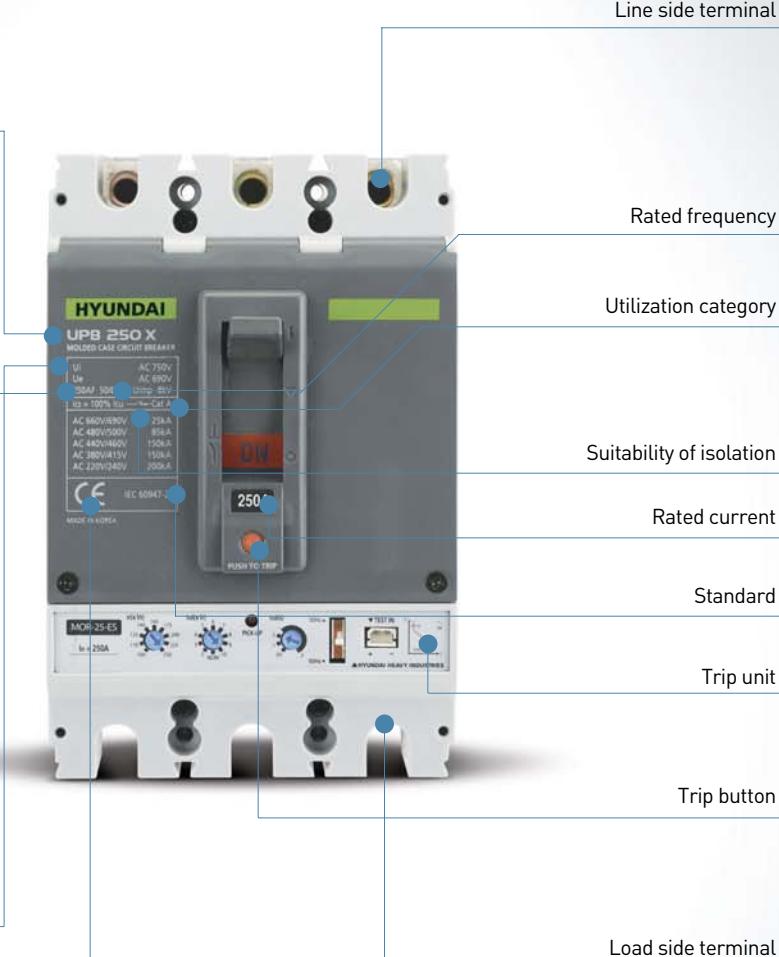

- UPB : Type
- 250 : Ampere frame size
- X : Recognition code for order

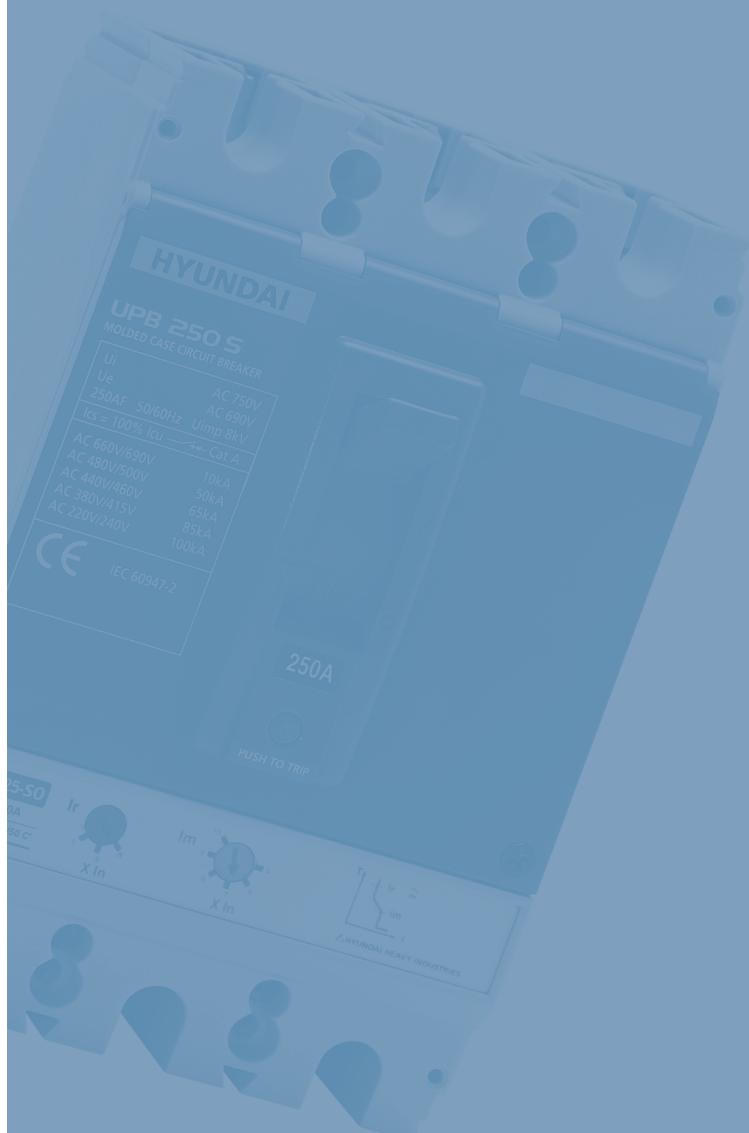

#### Ampere frame size

#### Main characteristics

- $U_i$  : Rated insulation voltage
- $U_{imp}$  : Rated impulse withstand voltage
- $U_e$  : Rated operational voltage
- $I_{cu}$  : Rated ultimate short-circuit breaking capacity
- $I_{cs}$  : Rated service short-circuit breaking capacity

#### Approvals and certificates

\* - The breaking capacity highlighted with blue and thick type is standard nominal value for each model in this catalogue.

1) Available for 3P breaker

2) \*2P breaker has same dimension as 3P breaker, but the middle pole is removed.

## ■ Accessories

- Signal

Auxiliary switch	1C, left-hand-side				
	AUX 20C L1				
Trip alarm switch	1C, left-hand-side

※ 1) Available for 3P breaker

2) Connection blocks are required for internal accessory installation in both line & load side plug-in type 3P breaker.

3) 2EA are required for both line & load side plug-in type 3P breaker.

4) TYA type connection blocks are to be installed with separate mounting angle. Separate mounting angle is not supplied.

## Signal Accessories

- Signal accessories adopts cassette type assembly method, so they can be easily installed and removed.

**Auxiliary**      **AUX**

- Electrically indicates ON and OFF status of breaker

**Trip alarm switch**      **ALT**

- Electrically indicates TRIP status of breaker

**Shunt trip**      **SHT**

- Electrically trips breaker at remote place

**Under voltage trip**      **UVT**

- Automatically trips breaker when control voltage drops below predetermined value

Different cables are available on request.

## Operating Accessories

- Operating accessories offers convenience and safety in operation of breaker.

### Operating handle **TFG, TFH**

- Enables manual operation of breaker without panel door-open
- Offers panel door-lock and reverse interlock function
- Satisfies IP54

#### Surface type / **TFG**

#### Extended type / **TFH**

- Useful in case that panel door is far from breaker
- Mechanism part is installed on front of breaker and connected with operating part by shaft

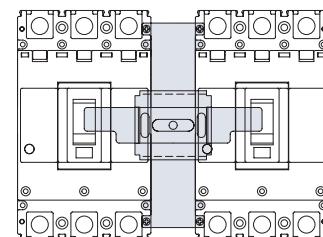

### Motor operator **MOT**

- Enables automatic remote ON and OFF operation as well as manual operation
- Applied to electric supervision and control system
- Equips an emergency trip button in all range

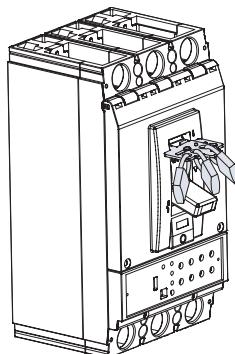

### Mechanical interlock **MIF**

- Mechanically prevents simultaneous closing of two breakers

### Padlock plate **PLD**

- Locks the breaker in OFF position

### Extension handle **THA**

- Reduces strength in operation of breaker

\* - In case of surface type (TFG), there are three types for diverse panel door-lock application, above mentioned codes are standard type. For detail, please refer to following explanation.

[1] Upper, right and left indicates the power supply direction of MCCB.

### Power supply direction of MCCB

- Surface type (TFG) operating handles are divided into three types by power supply direction of MCCB.

\* ON, OFF and TRIP are not marked on real products.

### Panel door-lock

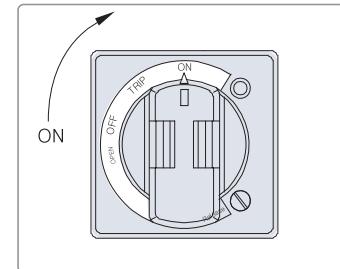

- Surface type (TFG) operating handles offer four options in panel door-lock application.
  - OFF OPEN type: Panel door opens when operating handle is in OFF position. Indicating code (last digit of full order code) is 1. ex. TFG 10AS U1
  - OFF OPEN type with reverse interlock: Panel door opens when operating handle is in OFF position. Reverse interlock keeps MCCB not to be "ON" when panel door opens. This is standard type for 400-800AF MCCB and indicating code (last digit of full order code) is 2. ex. TFG 46DS U2
  - RESET OPEN type: Panel door opens when operating handle is in RESET position. Indicating code (last digit of full order code) is 3. ex. TFG 10AS U3
  - RESET OPEN type with reverse interlock: Panel door opens when operating handle is in RESET position. Reverse interlock keeps MCCB not to be "ON" when panel door opens. This is standard type for 30-250AF MCCB and indicating code (last digit of full order code) is 4. ex. TFG 46DS U4
- When panel door is required to open in ON position of operating handle, please turn the RELEASE knob to indicated direction and open the panel door.
- For more operating function, please refer to following pages.

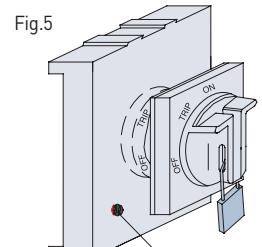

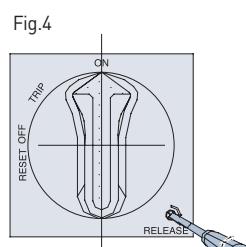

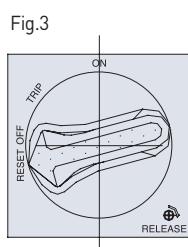

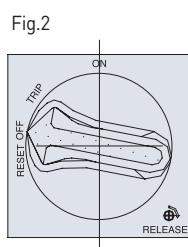

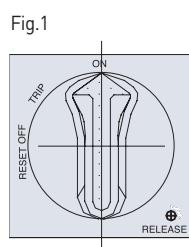

# Operating Accessories

## Operation

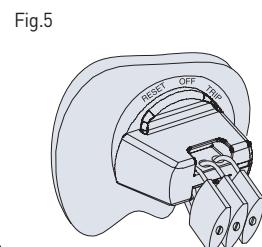

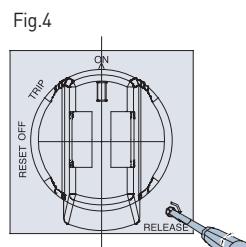

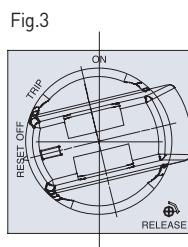

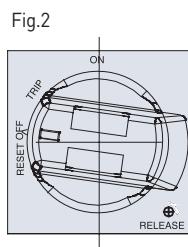

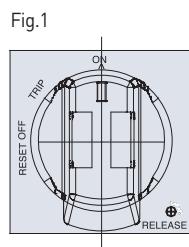

- Operating direction
  - Turn the handle in a clockwise direction for ON.
- Operation in panel door-closed
  - MCCB ON: Turn the handle to ON position. (Fig. 1)
  - MCCB OFF: Turn the handle to OFF position. (Fig. 2)
  - MCCB TRIP: When MCCB trips, handle turns to TRIP position automatically.
  - After MCCB trips, turn the handle to RESET position first and turn to ON position for MCCB ON. (Fig. 3 and Fig. 1)
  - When panel door is required to open in ON position of operating handle, please turn the RELEASE knob to indicated direction and open the panel door. (Fig. 4)
- Lock and release of panel door
  - When MCCB is in ON, OFF and TRIP status, both operating handle and panel door are locked.
  - When MCCB is in OFF and TRIP status, panel door can be opened by turning the handle to RESET position. (Fig. 3)
  - Panel door shall be locked automatically when you close the door in MCCB ON status. Please turn the handle to ON position before closing the door.
- Lock of operating handle
  - If required, you can lock operating handle in ON or OFF position with padlock ( $\phi$  6-8 for S type,  $\phi$  4-6 for L type). Padlock is not supplied. (Fig. 5)
  - When MCCB trips, handle turns to TRIP position automatically.
- Handle position shall be same with MCCB position (ON, OFF, TRIP) before closing the panel door.

\* - Plug-in mounting is applicable for 3P breaker.

1) Connection blocks (CBM, TYA) are required for internal signal accessory installation in both line & load side plug-in type 3P breaker.

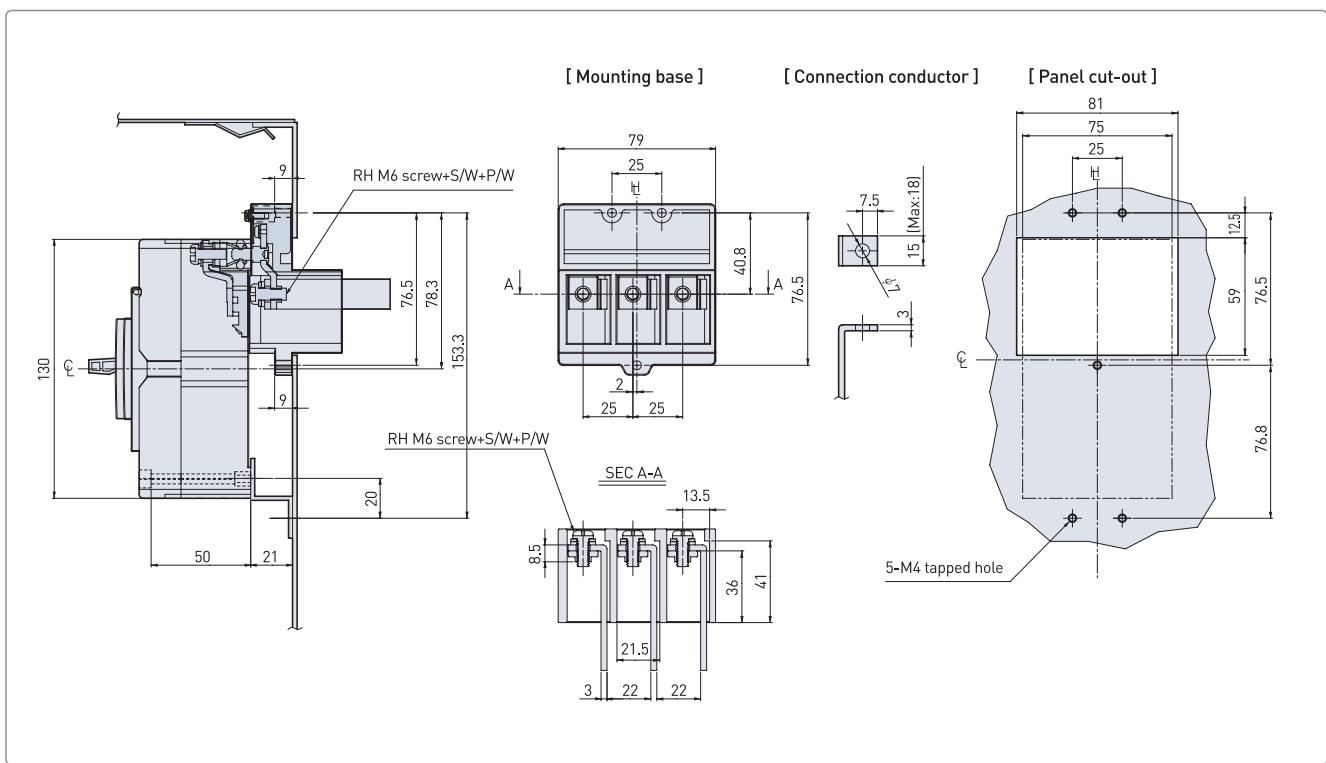

2) TYA type connection blocks are to be installed with separate mounting angle. Separate mounting angle is not supplied.

- TDA 10AD / Double mounting

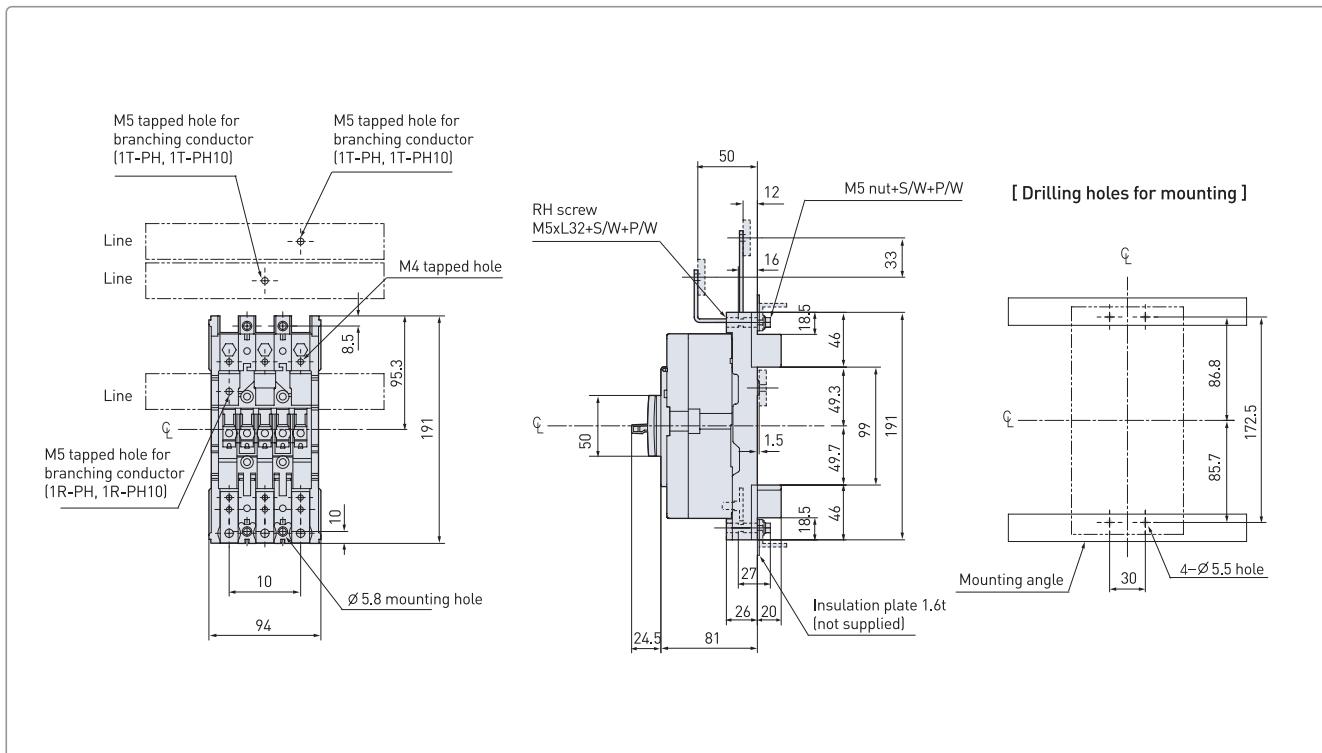

- TDA 10AS / Single mounting

- TDA 10BD / Double mounting

- TDA 10BS / Single mounting

## Terminal Accessories

- Terminal accessories offers convenience of connection, high protection for safety.

Terminal bus bar

TBB

- Increases the distances between terminals

Terminal cover

TCF

- Prevents direct contact to live terminal as well as insertion of external material

Cage terminal block

CTB

- Offers easy and direct connection of cables

Interpole barrier

TQQ

- Increases the insulation between poles

Rear barrier

REAR-BR

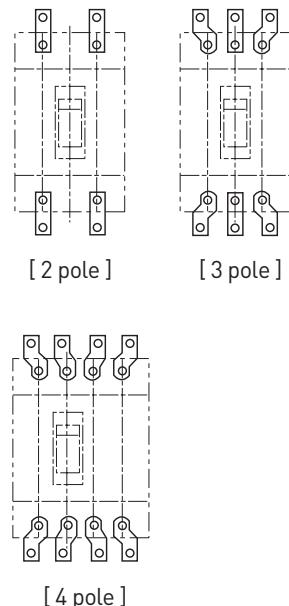

- Enhance the insulation of terminal

\* -The rated currents are for MCCBs.

-The mentioned values are applicable when MCCB trips within 10 sec. at 600% of full load current and the start-up inrush current is within 1700% of full load current.

-Above selection is also applied in case that several loads starts up at same time.

### ◆ Switch disconnector / UAD, UCD, UPD type

\* For the applicable breaker, please refer to page 16-31.

- \* 1) "S" (screw terminal connection) is default for UAD, UCB50-800 & UPD.
- 2) "B" (bus bar terminal connection) is default for UCD1000 & UCD1250.
- "B" (bus bar terminal connection) is available for 250AF and above breaker.
- Bus bar [TBB] can be ordered separately. For details, please refer to page 221.
- 3) Plug-in mounting is available for 3 pole breaker only.
- Mounting base [TDM] and components for plug-in mounting shall be ordered separately. For details, please refer to page 215.
- 4) "X" (plug-in mounting for both line & load side without connection block) is recommended when the internal signal accessory does not need to be wired through the mounting base.
- 5) "P" (plug-in mounting for both line & load side with connection block) is recommended when the internal signal accessory shall be plug-in also. Internal signal accessory shall be ordered along with breaker for wiring before ex-work.
- 6) "F" (plug-in mounting for line side only) is recommended when the screw terminal connection is required at load side.

## Handling Instruction | Inspection and Maintenance

# Handling Instruction

## | Storage |

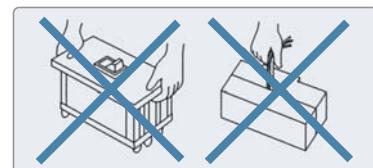

- Do not expose to corrosive gases.
- Do not expose to harmful gases including sulfur, ammonia and so on.
- Do not expose to high humidity for a long period.
- Do not expose to direct sunlight for a long period.
- Store at -20°C to +60°C without dust and humidity.
- Keep the handle in OFF position.

## | Transportation |

- Do not drop or apply shock during transportation.  
These can cause malfunctions in the breaker.

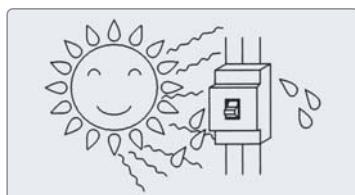

- Hold the breaker body for transportation. Do not hold terminal bus bar or external lead cable of accessories.

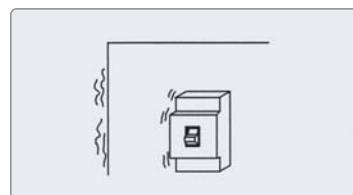

## | Standard operating condition for normal performance |

Ambient temperature	-5°C - +40°C, the average temperature for 24 hours shall not exceed 35°C
Relative humidity	45 - 85%
Vibration & shock	without excessive vibration and shock
Altitude	up to 2,000m
Surrounding	without excessive water vapor, oil vapor, smoke, dust, salts and corrosive materials

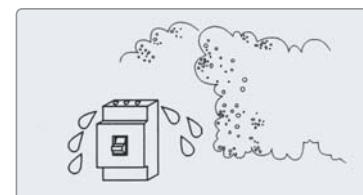

## | Installation and connection |

- Keep away from direct sunlight.  
High temperatures can cause malfunctions.

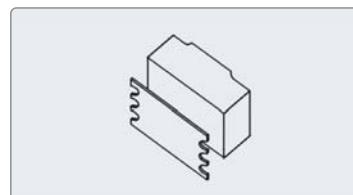

- Avoid any vibration or shock.  
If vibration or shock is expected, install breaker with shock absorber.

- Keep away from dust or metal pieces.  
When any work that accompanies dust or metal cutting is required, please cover the breaker first.

- Do not cover the terminal part completely for arc exhaust.  
Otherwise the breaking capacity may be decreased.

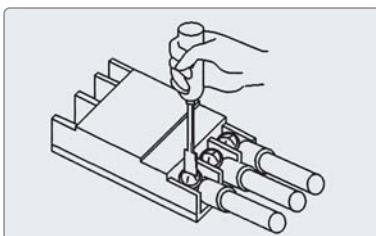

- Do not take off the black insulation plate in back side of breaker.  
Otherwise insulation shall be decreased or not secured.

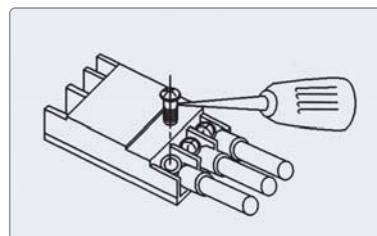

## Handling Instruction

### | Installation and connection |

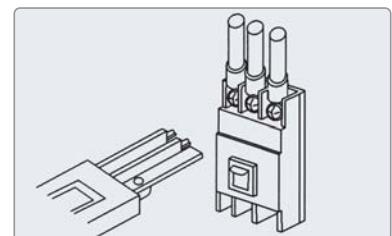

- Tighten the terminal screws to proper torque specified in manual.

The loose connection may cause overheating, and excessive torque may damage screws and terminal parts.

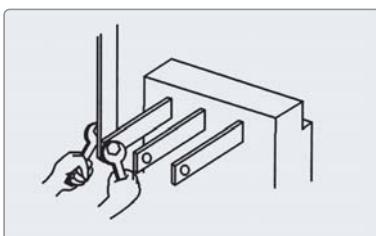

- Do not apply lubricant on terminal parts.

The lubricant lets screws loose and overheating occurs.

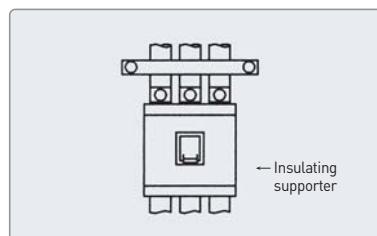

- Insulate exposed conductors.

To prevent short-circuit, be sure to insulate exposed conductors by interpole barrier, terminal cover, insulating tube, insulating tape and so on.

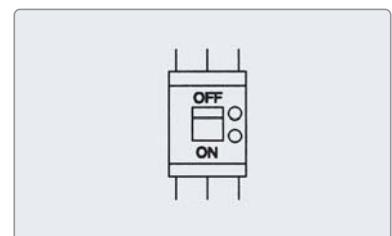

- Do not modify the shape of studs or terminal accessories.

Excessive force to stud and terminal accessories should also be avoided.

- Fix each conductor in parallel.

Short-circuit current can occur electromagnetic force between conductors, so each conductor is required to fixed firmly in parallel.

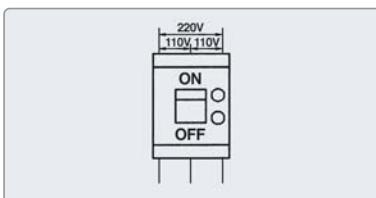

- Reverse feeding of earth leakage circuit breaker is not allowed.

In case of reverse feeding, power is supplied to circuit even the breaker trips, and it shall damage trip coil.

[Electromagnetic force per 1m conductor at 3 phase short-circuit] [Unit : N [kgf]]

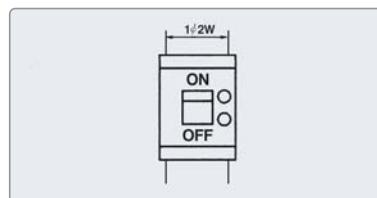

Short-circuit current / Internal power factor (kA)	Distance between conductors	
	10cm	20cm
10/0.4	490/50	245/25
18/0.3	1863/190	932/95
25/0.2	4412/450	2206/225

### | Connection of earth leakage circuit breaker |

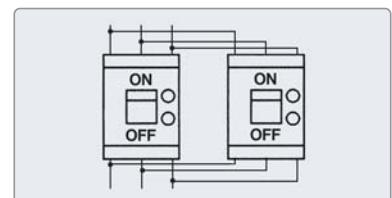

- Single phase three line circuit

Power line shall be connected to both side poles of breaker, and neutral line to middle pole.

- Single phase two line circuit

Circuit shall be connected to both side poles of breaker, and middle pole shall not be connected.

- Parallel connection is not allowed.

Parallel connection causes current unbalance, malfunction and trip coil damage.

# Inspection and Maintenance

## | Initial inspection |

- Please check the following prior to breaker operation.

Check point
Terminal part shall be clean from dust, metal pieces and so on.
Breaker shall not have any crack or damage.
There should be no condensation on terminal parts.
Insulation resistance should be more than $5MQ$ .
Terminal screws shall be tightened with specified torque.

## | Dielectric test |

- The test shall be done in these conditions.

Main circuit		Secondary and control circuit	
Rated insulation voltage ( $Ui$ )	Test voltage	Rated insulation voltage ( $U_{is}$ )	Test voltage
$Ui \leq AC300V$	AC2000V	$U_{is} \leq AC60V$	AC1000V
$AC300V < Ui \leq AC600V$	AC2500V	$AC60V < U_{is} \leq AC60V$	$2U_{is} + AC1000V$ (Max. AC1500V)

- Test for earth leakage circuit breaker

- Insulation resistance test

- Please use AC500V insulation resistance tester.
- Do not measure between R and T phase. Measuring does not cause damage unless AC1000V is applied.
- The measured resistance value shall be almost  $0\Omega$ .

- Dielectric test

- Do not apply test voltage, if test voltage is applied by mistake, the breaker can not be used.

## Inspection and Maintenance

### | Periodic inspection |

- In order to maintain the performance of breaker and prevent the unpredicted accident, the inspection shall be accompanied after installation and operation.
- Once after one month of operation, thereafter as below.

Circumstance		Inspection cycle after installation
Normal	Clean air, no humidity	within 10 years : once 2-3 year more than 10 years : once a year more than 15 years : once 6 month
	Dust but no corrosive gas	within 10 years : once a year more than 10 years : once 6 month more than 15 years : once a month
Bad	Sulfurous gas, salinity, vapor	within 5 years : once 6 year more than 5 years : once a month
	Excessive corrosive gas	once a month

### | Inspection and processing after breaking of fault current |

- If there is no pollution in arc exhaust parts and no other abnormality, the breaker can be re-used.
- When carbonizing symptom is found around arc exhaust parts, please measure insulation resistance. If the resistance value is more than  $5M\Omega$ , no dielectric breakdown at withstand test voltage and no excessive temperature rise of terminal parts, then the breaker can be re-used.
- If the handle part is carbonized or there is metallic melting in internal of breaker, please replace it with a new one.

## | Troubleshooting |

- In case of any abnormality during breaker operation, please handle it as below.
- For cases not mentioned in below, please contact us.

### Molded case circuit breaker

Symptom and possible cause			Troubleshooting
Overheating	• High temperature of terminal part • Damage in insulation part of terminal	• Loose connection between terminal and conductor • Heating by resistance increase of conductor • Heating from connection part between terminal bus bar and breaker	• Tighten screws with specified torque • Replace with a new breaker • Tighten screws with specified torque
	• High temperature of breaker body	• Heating by resistance increase of conductor • Loose internal assembly screws • Increase of current density from cable disconnection	• Replace with a new breaker
Inferior dielectric	• Abnormal voltage of load side	• Excessive contact abrasion • Foreign substances on contact • Corrosion of conductor by excessive ON-OFF or corrosive gas	• Replace with a new breaker
Inability of operation	• Inability of ON and RESET	• Inability of reset after trip • Non-energized UVT • Insufficient cooling of trip unit	• OFF the breaker after manual reset • Apply the power • Reset the breaker after cooling down
		• Corrosion, damage or deformation of bimetal • Abnormality or damage in mechanism • Exhaustion of durability • Contact melting by excessive high breaking current	• Replace with a new breaker
Frequent trip	• Trip at under rated current • Trip at operational current	• High ambient temperature • Heating by loose terminal screw connection • Heating from inside of breaker • Smaller connection conductor than specified size	• Cool down ambient temperature by ventilation or others • Tighten screws with specified torque • Replace with a new breaker • Use the specified size of conductor or adjust the rated current
		• Trip at start-up inrush current • Trip at change-over in star-delta operation • Instantaneous trip at reverse feeding	• Adjust the instantaneous trip setting or replace with a higher current breaker
		• Instantaneous trip at high start-up inrush current • Instantaneous trip at long start-up inrush current	• Replace with a higher current breaker
		• Short-circuit between motors • Misconnection of SHT, UVT control circuit	• Repair or replace motors • Inspect circuit wiring
Malfunction	• Non trip at the current higher than specified	• Current breaking by line side fuse or low coordination with primary breaker	• Redesign the coordination between equipment
		• Extremely low ambient temperature	• Adjust the current according to temperature derating curve
		• Out of rated frequency	• Apply the rated frequency or adjust breaker frequency knob
